SERVICE MANUAL

MODEL
R-K22/R-K22L

DIGITAL SYNTHESIZER

STEREO RECEIVER

No. 2656
JAN.1983

Safety Precaution

1. The design of this product contains special hardware, many circuits and components specially for safety purposes.

For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.

2. Alterations of the design or circuitry of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list in Service manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and/or the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard.

When service is required, the original lead routing and dress should be observed, and they should be confirmed to be returned to normal, after re-assembling.

5. Leakage current check
(Safety for electrical shock hazard)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the

Products (antenna terminals, knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5 mA AC (r.m.s.).

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

1. Specifications

AMPLIFIER SECTION

	'78 IHF	DIN
RMS Power	: 30 watts per channel, min. RMS, both channels driven, into 8 ohms from 20 Hz to 20 kHz, with no more than 0.03 % total harmonic distortion.	
	35 watts per channel, min. RMS, both channels driven, into 8 ohms from 40 Hz to 20 kHz, with no more than 0.5 % total harmonic distortion.	
	33 watts per channel, min. RMS, both channels driven, into 8 ohms at 1 kHz with no more than 0.008 % total harmonic distortion.	
	35 watts per channel, min. RMS, both channels driven into 8 ohms at 1 kHz with no more than 0.7 % total harmonic distortion.	
Total Harmonic Distortion	: 0.008 % at 33 watts (1 kHz, 8 ohms)	
Intermodulation Distortion	: 0.03 % at 30 watts	
Damping Factor	: 45 at 8 ohms, 1 kHz	
Input Sensitivity/Impedance		
PHONO	: 2.5 mV/47 kohms	
TAPE PLAY/AUX/VIDEO	: 150 mV/50 kohms	
TAPE PLAY (DIN)	: 150 mV/50 kohms	
Recording Output Level (DIN)	: 150 mV	
Frequency Response		
PHONE	: 20 Hz — 20 kHz, +0.5 dB, -0.5 dB	
(RIAA Equalization)		
TAPE PLAY/VIDEO/AUX	: 15 Hz — 40 kHz, +1 dB, -1 dB	
S.E.A. Graphic Equalizer		
Center frequencies	: 63 Hz, 250 Hz, 1 kHz, 4 kHz, 16 kHz	
Control range	: ±12 dB	
Loudness Control (Volume control at -40 dB position)	: 7 dB at 50 Hz 4 dB at 10 kHz	
Signal to Noise Ratio		
PHONO	: 71 dB (Short circuit 2.5 mV input)	59 dB
	78 dB ('78 IHF)	(Rec out)
TAPE PLAY/VIDEO/AUX	: 91 dB (Short circuit)	64 dB
	74 dB ('78 IHF)	

FM TUNER SECTION

	'78 IHF	DIN
Tuning Range	: 87.5 MHz—108.0 MHz	87.5 MHz—108.0 MHz
Usable Sensitivity	: Mono 10.3 dBf 0.9 μ V/75 ohms 1.8 μ V/300 ohms	(S/N 26 dB) 0.8 μ V/75 ohms 1.6 μ V/300 ohms
50 dB Quieting Sensitivity	: Mono 14.8 dBf (3.0 μ V/300 ohms) Stereo 38.3 dBf (45 μ V/300 ohms)	—
S/N 46 dB Stereo Sensitivity	: —	Stereo 23 μ V/75 ohms Stereo 46 μ V/300 ohms
Signal to Noise Ratio	: Mono 80 dB Stereo 73 dB (A-net.)	Mono 72 dB Stereo 63 dB (weighted)
(at 98 MHz, 80 dBf)		
Total Harmonic Distortion	: Mono 0.12 % Stereo 0.25%	Mono 0.10 % Stereo 0.40 %
1 kHz Frequency Response	: 30 Hz — 12.5 kHz, +0.5 dB, -3 dB	
Capture Ratio	: 1.5 dB (at 85 dBf 98 MHz)	1.0 dB (10 mV/300 ohms at 98 MHz)
Alternate Channel Selectivity	: 60 dB, ±400 kHz	55 dB, ±300 kHz
Image Response Ratio	: 56 dB at 98 MHz	
IF Response Ratio	: 85 dB at 98 MHz	
Stereo Separation	: 40 dB at 1 kHz	

AM TUNER SECTION MW

Tuning Range		
Channel space	: 522 kHz—1611 kHz 9 kHz	522 kHz—1611 kHz
Channel space	: 520 kHz—1710 kHz 10 kHz	
Sensitivity	: 250 μ V/m at 1000 kHz 50 μ V at 1000 kHz	250 μ V/m at 999 kHz 50 μ V at 999 kHz
Signal to Noise Ratio (100mV/m)	: 50 dB at 1000 kHz	50 dB at 999 kHz
Selectivity	: 40 dB, ±10 kHz at 1000 kHz	45 dB for R-K22L 36 dB, ±9 kHz at 999 kHz

LW (R-K22L only)

Tuning Range	: 153 kHz — 360 kHz
Sensitivity	: 400 μ V/m at 245 kHz 70 μ V at 245 kHz
Signal to Noise Ratio (100 mV/m)	: 45 dB at 245 kHz
Selectivity	: 40 dB ±9 kHz at 245 kHz

Design and specifications subject to change without notice.

Power Specifications

Areas	Line Voltage & Frequency	Power Consumption
U.S.A., Canada	AC 120 V, 60 Hz	125 W, 155 VA
Europe	AC 220 V~, 50 Hz	260 watts
U.K., Australia	AC 240 V~, 50 Hz	260 watts
Other Areas	AC 110/120/220/240 V~, Selectable, 50/60 Hz	260 watts

Dimensions and Weight

Dimensions			Weight
Height	Width	Depth	Net
92 mm (3-5/8")	435 mm (17-1/8")	365 mm (14-3/8")	5.5 kg (12.1 lbs)

2. Names of Controls and Their Functions

① POWER switch

ON (): Press to set to this position to turn the power on.

OFF (): Press to set to this position to turn the power off. Even when it is in this position, and the power cord is disconnected, preset station data is maintained for one or two weeks.

② Headphone jack (PHONES)

Plug stereo headphones into this jack for private listening and to monitor recording. Plugging stereo headphones makes the speaker sound automatically turned off.

③ SPEAKERS switch

SYSTEM-1 (): Set to this position to listen to speakers connected to the SPEAKER SYSTEM-1 terminals.

SYSTEM-2 (): Set to this position to listen to speakers connected to the SPEAKER SYSTEM-2 terminals.

Two pairs of speaker systems cannot be used at the same time.

④ LOUDNESS switch

Press to compensate for the ear's different sensitivity to sound at low volume.

⑤ SEA REC switch

Press to record tapes with the added effect of the S.E.A. graphic equalizer.

⑥ BALANCE control

Use to adjust the balance between the left and right speakers.

⑦ VOLUME control

Slide to the right to increase the sound level.

⑧ TAPE MONITOR switch

Press to listen to the tape deck connected to the TAPE terminals or DIN socket. Release the switch to hear the source selected with the source select switches.

⑨ VIDEO/AUX switch

Press to hear sound from the source connected to the VIDEO/AUX terminals on the rear panel.

⑩ PHONO switch

Press to hear or record sound from the turntable connected to the PHONO terminals on the rear panel.

⑪ FM switch

Press to switch on the FM tuner section.

⑫ AM switch (for R-K22): MW switch (for R-K22L)

Press to switch on the AM (MW) tuner section.

⑬ MODE/SCAN switch (R-K22 only)

This switch is used to select both FM STEREO/MONO mode and AUTO/MANUAL scanning mode. These functions are related to each other. When stereo reception is possible, set this switch to AUTO/STEREO () for auto tuning.

When signals are too weak to be received by auto tuning, set to MANU/MONO () for manual tuning and the left and right channel FM signals are mixed and heard from both speakers.

14 TUNING buttons

Auto tuning

Up-scanning button (▶): When this button is pressed and released, the tuned-in frequency changes in the direction of increasing frequencies. Scanning (Auto Tuning) stops automatically when the next FM (or AM) frequency is tuned in. This tuned-in frequency is displayed digitally by the frequency indicator.

When you keep this button depressed, scanning does not stop even if broadcasts are detected. Down-scanning button (◀): Press to tune in the direction of decreasing frequencies. Functions are identical with those of the Up-scanning button.

Note: Scanning starts when the ◀ or ▶ button is pressed and is stopped by pressing the MODE/SCAN switch.

Manual tuning

Manual tuning is possible by pressing the MODE/SCAN switch. Pressing the Up/Down-scanning buttons, the frequency changes in predetermined steps (see table below). Tapping this button changes the tuner step by step; pressing continuously (more than 0.5 sec.) changes tuning in a high speed scanning sequence which stops when the button is released.

Channel spacing

AM channel spacing switch (R-K22 only) is provided on the rear panel for selecting 9 kHz or 10 kHz steps according to your area.

Note: * Preset at the factory.

Band Area	FM	AM (MW)	AM (LW)
U.S.A., Canada	100 kHz	*10 kHz/9 kHz	—
Continental Europe, U.K., Australia	50 kHz	9 kHz	1 kHz
Other areas	*50 kHz	*9 kHz	—
	100 kHz	10 kHz	

15 MEMORY switch

Press this switch and the memory indicator will light to show that the unit is ready to receive a frequency to be held in memory. (This switch is non-lock type.) Pressing the station select button while the MEMORY indicator is lit (for about 10 sec.) makes it possible to store the frequency being received in memory. When the MEMORY indicator is not lit, the memory function does not operate.

16 Station select buttons/station indicators

These buttons are used to select one of the preset stations or to store the station frequency in memory. When one of these buttons is pressed, the number in the button pressed will light to show the preset station.

If one of these buttons is pressed when the MEMORY switch is pressed in, the frequency which is being received will be stored in memory. One of the station select buttons can be used in common for one FM station and one AM station (one MW or LW station for R-K22L).

If you change the mode from radio reception to any other mode including power-off and back to radio reception, the station previously selected with the station select buttons remains in.

17 Frequency indicator

The tuned-in frequency is displayed digitally. Four digits (kHz) are displayed for AM reception and five digits (MHz) (for Europe, U.K., Australia and other countries) or four digits (MHz) (for U.S.A. and Canada) are displayed for FM reception.

18 FM QSC/STEREO indicator

When QSC works, this LED lights in orange. When receiving an FM stereo broadcast normally, this LED lights in green.

19 MEMORY indicator

When the MEMORY switch is pressed, this MEMORY indicator lights to show that the unit is ready to store a preset frequency in memory. This indicator will go out automatically in about 10 sec. or when the station select button is pressed.

20 SIGNAL STRENGTH indicator

This is used in tuning to both FM and AM (MW/LW) broadcasts. The greater the number of LEDs that light, the stronger the signal being received.

21 POWER indicator

When the POWER switch is pressed to on, this indicator lights.

22 S.E.A. graphic equalizer system

These five controls allow you to individually boost or lower response in five portions of the frequency spectrum by 12 dB. For operation of these controls, which give far more flexible control over tone than the conventional bass/treble controls. Preset patterns will add to your listening pleasure for different types of music.

23 LW switch (R-K22L only)

Press to switch on the LW tuner section.

4. Removal Procedures

4-(1) Removal Procedures of Bottom Cover

Step (1)

Fig. 4

Step (2)

Fig. 5

Step (3)

Fig. 6

Step

- (1) Remove the power supply P.C. board from fastener.
- (2) Remove screws ① - ⑤ on the P.C. board. (Fig. 4)
- (3) Remove screws ① - ⑪ on the chassis base. (Fig. 5)
- (4) Remove the chassis base in this manner shown in Fig. 6.

5-(2) Power Amplifier Idling Current Adjustment Procedures

Fig. 8

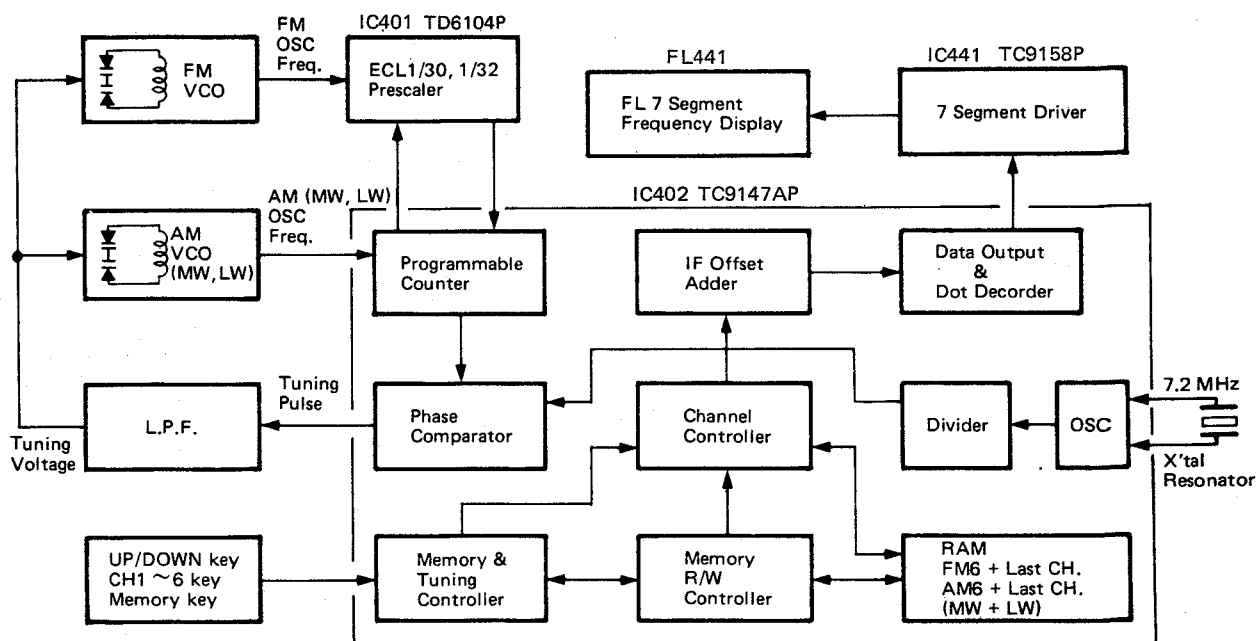

Precaution

1. Turn R719 and R720 fully counterclockwise before the power switch on.
2. Allow the set warm up at least 5 minutes before adjustment.
3. Must keep the heatsink to prevent overheating before adjustment.
4. Set the volume control to minimum during this adjustment.

Adjustment

5. Connect a DC. VTVM. to R733 resistor's leads for left channel, or to R734's leads for right channel.
6. Adjust R719 for left channel, or R720 for right channel, so that the DC. VTVM. reads 5 mV.

A

W

- Notes:**
1.  shows DC voltage to the chassis with no signal input.
 2. — indicates positive B power supply.
 3. --- indicates negative B power supply.
 4.  indicates signal path.
 5. When replacing the parts in the darkened area () and those marked with Δ , be sure to use the designated parts to ensure safety.
 6. Parts in red indicate transistors or ICs.

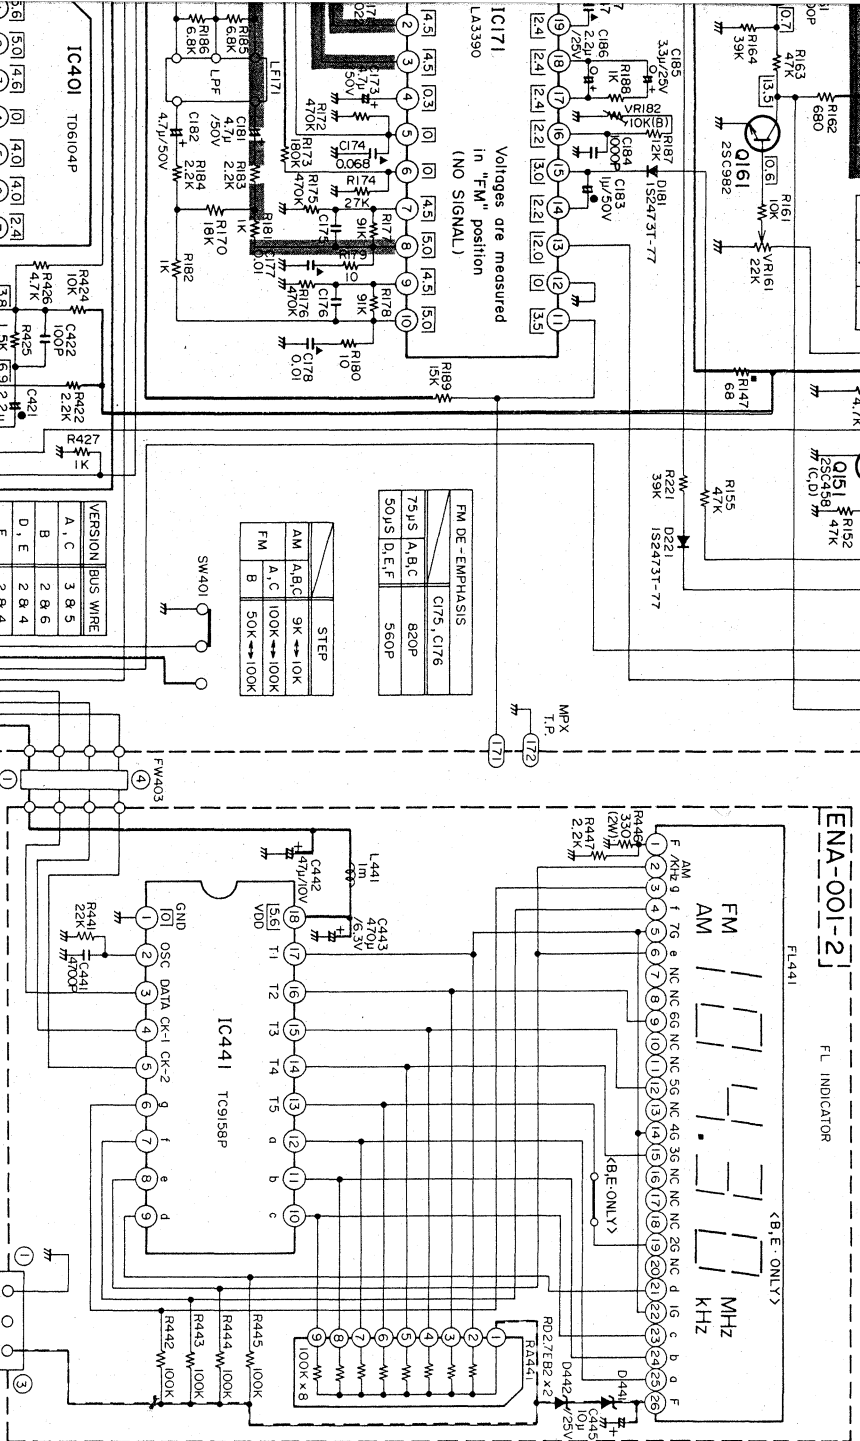

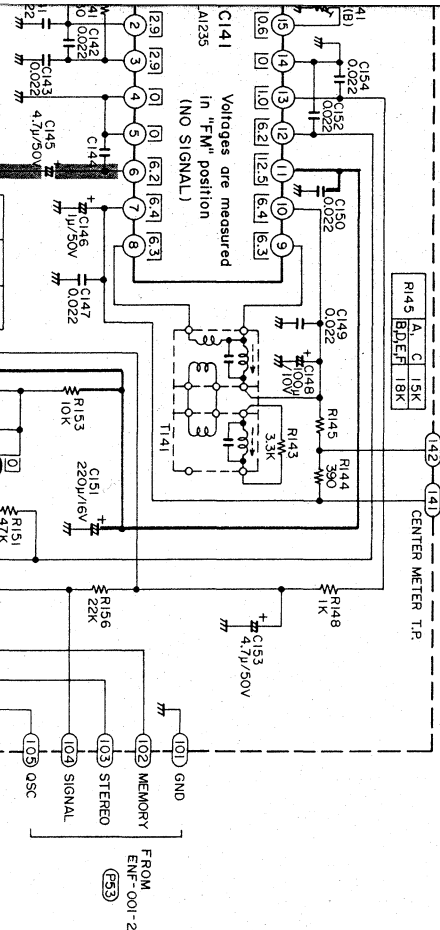

7. This is the standard circuit diagram.
The design and contents are subject to change without notice.
